- Windows Installer 4.5 \*
- Microsoft .NET Framework 4 and Update for .NET Framework 4 (KB2468871) \*

*\* Installed automatically during weboomerang installation process*

**Release Date:** August 5, 2014

**weboomerang Software Version:** 2.0

**Supported Products:** PicoLite, MicroLite II, MicroLogPRO II

### **Release Information**

#### *New Features*

- Added support for MicroLite II and MicroLogPRO II data loggers
- Added support for PicoLite firmware v2.0
- PDF data report:
  - Added MKT calculation
  - Added data table, including all data samples on logger memory with time stamps and alarm status
- Revamped communication protocol with weboomerang server, resulting in even more robust online connection

#### *Known Issues*

- If installation process fails at first attempt, re-launch the installation file and it will succeed at second attempt.
- When DataSuite software is opened while weboomerang is running, if any connected device is not detected by DataSuite then disconnect device, re-launch DataSuite, and reconnect device.
- No support for Windows XP

**Release Date:** August 14, 2013
