DATA ANALYSIS SOFTWARE

Now available on your Android mobile device

About

FourtecLite is an Android mobile application utility that enables you to review sampling sessions history, configure your devices and monitor online sampling sessions.

The application supports the following devices

MicroLite III
Temperature

MicroLite III
Temperature / RH

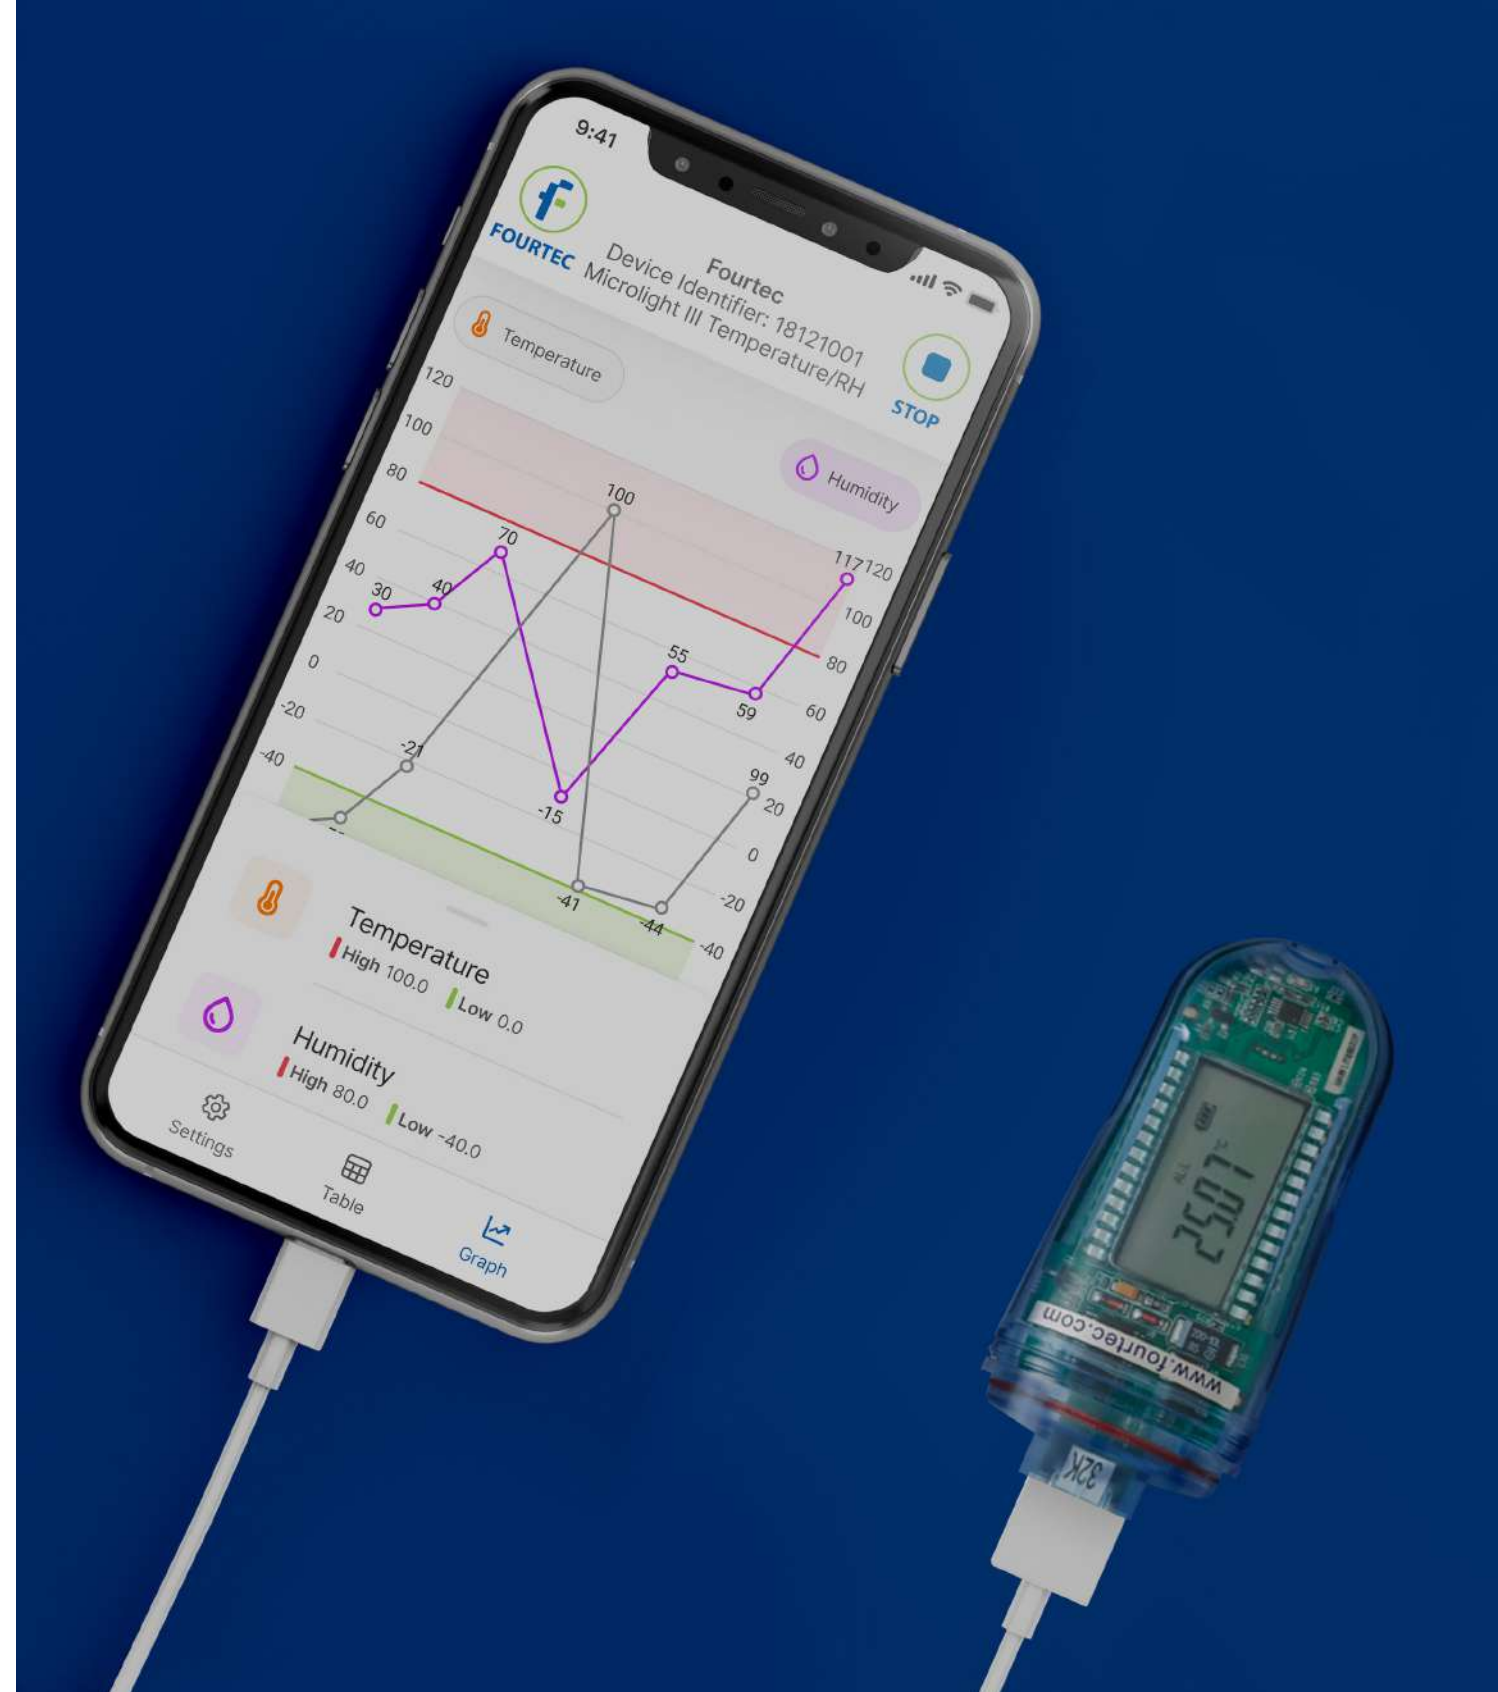

MicroLite III NTC

MicroLogPro III
With external probe

PicoLite

What you can do with FourtecLite?

FourtecLite was developed to provide a convenient, easy to use and portable data monitoring solution. It's a simple to use mobile application that allows you to present and download real time data from the data logger for temperature and humidity, send email notifications of data abnormalities, define settings for each and every sensor and sync it when required with the DataSuite to keep data flow.

SEAMLESS CONNECTION
AND CONNECTIVITY

Keep your data updated wherever you go

The FourtecLite app enables seamless cross platform connectivity in order to protect the data and allow a several ways to download and transfer the data monitored in the data logger-

- 1 Data logger connected to the mobile phone - enables downloading all data stored in the logger to your phone

Note - data will also be remain in your Data Logger

- 2 Data logger connected to the computer by using DataSuite software- enables download of all data logger data to the computer.

- 3 Mobile phone connected to the computer- enables sync of all the data loggers that were connected to the mobile phone, directly to the DataSuite software.

*Some connections may require a USB cable and adapter.
